PROJECTS

QuickLearn
As the popularity of reels grows daily, many seek educational content but often encounter entertainment-based reels instead. To address this gap, we developed a website dedicated to educational content. This platform empowers teachers and content creators to upload, share, and disseminate their knowledge, thereby reaching a wider student audience.

Chatbot
For people travelling to India for the very first time, we made a Chabot that helps people fins the best foods in the town at their rates. Using flutter application for frontend we created a application for Chabot and in backend we used firebase for database and fetching answer.

Finder
This app allows you to grab the latest discounts for making the best deal for you to shop. The app gives you a number of categories to choose from all over the world. Using python as main language for project, we fetch data of discounted products and displaying to user on the web.
